DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 55-62, drawn to a memory cell device, classified in class 257, subclass 296.
 - II. Claims 63-70, drawn to an integrated circuit device, classified in class 365, subclass 174.
 - III. Claim 71, drawn to a computer system device, classified in class 711, subclass ++.
 - IV. Claims 72-123, drawn to a method of forming a lower electrode for a capacitor, classified in class 438, subclass 240.
2. Inventions IV and I-III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the capacitor could be formed on a handle substrate with lower electrode uppermost and the substrate can be added and then the handle substrate removed.

In addition, if the device is elected, Applicant is further required to elect between group I-III as combination/ subcombination as follows:

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because:

With respect to inventions II&III, the computer system could be formed using a bubble memory and the circuit could be used for a logic function.

With respect to inventions I&II, the circuit could be formed using flash memory cells and the memory cell could be use for a logic function.

With respect to inventions I&III, the computer system could be formed using a memory cell.

Because these inventions are distinct for the reasons given above and the search required for Group I-IV are different and restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2814

remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
